SUMMARY

DevOps Engineer with 1.5 years of production experience – sole infrastructure owner for a SaaS platform serving 30,000+ users. Cut AWS costs 37.5% through CDN architecture redesign. Resolved P0 latency incident (40s to 1s) during a live product launch. Delivered paid AWS infrastructure projects for a US client. Solo-built Agentic FinOps platform with working MVP live at thriftex.app.

EXPERIENCE

DevOps Engineer

Feb 2026 – Present

Signiance Technologies

Remote

- Deployed Python AI agent and Node.js application on EC2 – PM2 process management, Nginx reverse proxy, SSL/TLS via Certbot
- Built ETL pipeline PoC using AWS Glue, Step Functions, PySpark, Redshift, Lambda, and S3 – end-to-end data ingestion and transformation workflow
- Developed serverless bill classification automator with AWS Lambda – tag-based cost categorization and automated report generation to Google Sheets
- Tested AWS Bedrock AgentCore Runtime APIs via Postman; configured Amazon Cognito as authentication provider for agent access control

DevOps Engineer

Aug 2025 – Jan 2026

ByteHint IT Solutions

Remote

- Sole DevOps engineer for SaaS platform serving 30,000+ users – owned full infrastructure lifecycle from provisioning to incident response
- Diagnosed and resolved P0 incident during live product launch – cut response time from 40s to 1s by identifying ECS task concurrency bottleneck and implementing request-based auto-scaling
- Cut AWS costs 37.5% by identifying S3 bandwidth inefficiency (\$0.08/GB) and rerouting traffic through CloudFront (\$0.05/GB)
- Architected full AWS stack: ECS Fargate, ALB with SSL/TLS, multi-tier VPC with public/private subnets, NAT Gateway, least-privilege IAM, CloudWatch monitoring, GitHub Actions CI/CD
- Deployed AI inference microservice on EC2 – FastAPI, Nginx reverse proxy, Hugging Face integration with zero-downtime deployment

Cloud Solutions Consultant

Nov 2025 – Mar 2026

Wet Dog Weather, USA (Freelance via Upwork)

Remote – International

- Repeat-hire contract – worked directly with COO across two independently delivered projects
- Listed client SaaS product on AWS Marketplace end-to-end: configuration, metering, pricing, and public availability
- Built customer onboarding portal with Google Sheets integration and MapLibre-based interactive location picker

Software Engineer Intern

May 2025 – Aug 2025

ByteHint IT Solutions

Remote

- Sole backend engineer – built production SaaS backend from scratch using Node.js, Express.js, and MongoDB
- Implemented JWT authentication and OAuth 2.0 integration; built 10+ REST APIs for multi-tenant architecture
- Reduced production bugs by **25%** through API contract testing and input validation across all endpoints

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, ECS Fargate, ALB, S3, CloudFront, IAM, VPC, RDS, ECR, Lambda, Glue, Step Functions, Redshift, Bedrock, Cognito, Secrets Manager, CloudWatch, SNS, CodePipeline), Azure (basic)

Networking: VPC design, public/private subnets, NAT Gateway, Internet Gateway, security groups, NACLs, ALB, SSL/TLS, DNS, Nginx reverse proxy, TCP/IP, HTTP/HTTPS, firewall rules

DevOps & CI/CD: Docker, Terraform, GitHub Actions, AWS CodePipeline/CodeBuild/CodeDeploy, PM2, Nginx, Certbot, Linux, Bash scripting, Git

Backend & Data: Node.js, FastAPI, Python, REST APIs, MongoDB, MySQL, Supabase, PySpark, AWS Glue

Currently Learning: Kubernetes (EKS), Helm, ArgoCD, Ansible, Prometheus, Grafana

PROJECTS

Agentic Cloud FinOps Platform (Thriftex) | *Node.js, Python, FastAPI, React, AWS*

thriftex.app

- Solo-built working MVP: 3 services (Node.js API, Python AI agent, React frontend), 14 REST endpoints, 6 dashboard pages
- Built multi-step AI agent (Observe → Reason → Plan) with memory, goal-awareness, and structured JSON output
- Implemented statistical anomaly detection (z-score) and 30-day cost forecasting using Prophet and NumPy
- Integrated AWS Cost Explorer API for real spend data with service-level breakdown and month-over-month analysis

Production-Grade Multi-Tier AWS App | *Terraform, ECS Fargate, RDS, CodePipeline, CI/CD*

[GitHub](#)

- Built 3-tier application (React, Node.js, MySQL on RDS) on AWS using Terraform with 12 modular components: VPC, ECS, RDS, ALB, CloudFront, ECR, CodePipeline, CodeBuild, CodeDeploy, Secrets Manager, SNS, CloudWatch
- Blue-green deployment via CodePipeline and CodeDeploy with automatic rollback on health check failure – zero-downtime releases
- Secure multi-AZ architecture: private subnets for app and DB tiers, NAT Gateway, least-privilege security groups, Secrets Manager

EDUCATION

D Y Patil International University

Bachelor of Technology in Computer Science Engineering | **CGPA: 8.89/10**

Aug 2022 – May 2026

Pune, India

CERTIFICATIONS & ACHIEVEMENTS

Certifications

AWS Certified Solutions Architect – Associate (exam scheduled, 2026)

NPTEL Big Data Computing – **Elite Certificate, 94% score, Top 1% of 5,740 candidates** (IIT Kanpur, Aug–Oct 2025)

Achievements

Runner-Up, Azure Cloud Mastery Workshop (12-day intensive program) – 2024
